

OVERVIEW

Computer Science student specializing in Backend Development, Full Stack Development, AI/ML, and Cloud technologies. Skilled in building scalable applications using Java, Python, Flask, Node.js, and modern development workflows. Interested in automation, distributed systems, and data-driven engineering.

EDUCATION

Master of Integrated Technology- Noida Institute of Engineering and Technology 7.0 CGPA	2022-2027
Higher secondary School- R.k. Modern senior secondary school 66.8%	2021-2022
Senior secondary school- R.k. Modern senior secondary school 76.8%	2019-2020

SKILLS

Programming language: JAVA, JavaScript, Python

Database: MySQL, PostgreSQL, MongoDB, Redis

Developers Tool: VS code, IntelliJIDEA, Jupyter Notebook, Git, Github, Eclipse, Postman

Backend & Frontend framework: Node.js, Express.js, Flask, JWT, REST APIs, React, Html, Css

Core Subject: DSA, OOPS, DBMS, Operating system, Computer Network, AIML

Cloud & DevOps: AWS, Google Cloud, CI/CD, Github Actions, Vercel, Supabase, Jenkins, Docker

GEN AI: LLM, SLM, RAG, AI Automation

WORK EXPERIENCE

MERN STACK DEVELOPER INTERN-WAYSPIRE July 2024- Sept 2024

- Built and deployed responsive web applications using the MERN stack.
- Engineered dynamic, mobile-first web interfaces, improving front-end rendering efficiency.
- Improved development efficiency using automation tools.

WEBSITE MAINTAINER July 2023- June 2024

- Enhanced user engagement through content management.
- Managed end-to-end administration, security patching, and hosting configurations for infoglx.com.
- Developed and optimized backend script modules, reducing page latency and improving system performance.

PROJECTS

EVENT MANAGEMENT WEB APPLICATION | [Github](#)

Technologies used: Java, JDBC, SQL, Servlet, JSP, Eclipse IDE

- Developed a full stack event management app to streamline event planning and coordination.
- Implemented dynamic web interfaces using Servlet and Jsp for user interaction.
- Designed a robust database using SQL and integrated it with java using JDBC for efficient data handling.

AEROTRACER: Aircraft Crash Location Prediction System | [Github](#)

Technologies used: Python, Flask, XGBoost, Leaflet.js

- Built an AI-powered web platform to predict probable aircraft crash zones using flight telemetry.
- Developed geospatial visualization using Flask and Leaflet.js.
- Implemented XGBoost Multi-Output Regression achieving 90%+ prediction accuracy with response time under 100 ms.

CERTIFICATIONS

- Google Cloud Labs Certification | [linkedin](#)
- Introduction to AI – IBM | [Linkedin](#)
- Object Oriented Programming in Java – UC San Diego | [Linkedin](#)
- Python for Data Science – IBM | [Linkedin](#)
- Human Centered Design – University of Toronto | [Linkedin](#)
- AWS Solutions Architecture – Forage | [Linkedin](#)
- Networking Management System – Infosys | [Linkedin](#)
- CI/CD DevOps – Infosys | [Linkedin](#)
